Data Source: CHE

Projections were created by category of enrollment by projecting increases/decreases in enrollment based on data from the last years for that category.

Other projection models were also reviewed with very little variability from the model using the historical mean, thus the committee decided to use the historical mean projection model.

Note: Non-Degree Seeking: Because of the small N and the amount of variability in the non-degree seeking enrollment, a straight mean of the past years was inserted into the projection rather than using the mean increase decrease to project a number.
